04 Content	
05 Introduction	
06 Preface & Scope	
07 Chapters	
I.	THE DEVELOPMENT OF MOLECULAR BIOLOGY AND BIOINFORMATICS
	1.01 Short History
	1.02 Biological Information – definition
	1.03 Revisiting Crick's Dogma
II.	ESSENTIALS OF MOLECULAR BIOLOGY AND BIOINFORMATICS – 2009
	2.00 Essentials of Molecular Biology and Bioinformatics
	2.01 Nucleic Acids
	2.02 Genomes
	2.03 Transcription
	2.04 Nucleotide Related Databases
	2.05 Amino Acid and Protein Syntheses
	2.06 Translation
	2.07 Proteins
	2.08 Protein Interactions & Metabolic Pathways
	2.09 General Bioinformatics
	2.10 Collection of tools – Appendix
III.	SPECIAL PURPOSE TOOLS DEVELOPED BY BIRO
	3.00 Special Purpose Tools Developed by Biro
	3.01 SeqX
	3.02 SeqX_1.041
	3.03 A New Method for Database Searching - the BlastNP
	3.04 A Novel Sequence Similarity Searching and Visualization Method
	3.05 The BlastNP
	3.06 SeqConv
	3.07 SeqForm
IV.	CREATIVE IDEAS IN MOLECULAR BIOLOGY & BIOINFORMATICS
	4.00 Creative ideas in molecular biology & bioinformatics
	4.01 Speculations about alternative DNA structures
	4.02 Genome-Wide Associative Regulatory Role of SINE and LINE.
	4.03 Indications that codon boundaries are physico-chemically defined
	4.04 A common periodic table of codons and nucleic acids
	4.05 Evolution of the Genetic Code
	4.06 GNC-SNS Hypothesis on the Origin and Evolution of the Genetic Code – by <i>Kenji Ikehara</i>
	4.07 Nucleotide Composition and Folding Energy of coding sequences
	4.08 The Prion Paradox - Infection or Polymerisation
	4.09 Stabilizing Electrostatic Interactions between Residues in Collagens
	4.10 Recognition Site-like Sequences in the Restriction Endonucleases
	4.11 Comparative Analysis of Specificity in Protein-Protein - 1

- 4.12 Comparative Analysis of Specificity in Protein-Protein - 2
- 4.13 Comparative Analysis of Specificity in Protein-Protein – 3
- 4.14 Protein folding information in nucleic acids
- 4.15 The Meaning of a Redundant Codon
- 4.16 Amino acid size, charge, hydrophathy indices and matrices
- 4.17 Nucleic acid chaperons - RNA-assisted protein folding
- 4.18 The Proteomic Code - a Molecular Recognition Code for Proteins
- 4.19 Design and Production of Specifically Reacting Peptides
- 4.20 Sense-Antisense (Comp) Peptide Interactions - *by Serapian et al.*
- 4.21 Discovery of Proteomic Code with mRNA Assisted Protein Folding
- 4.22 Completing the Genetic Code
- 4.23 Does codon bias have an evolutionary origin
- V. **PHYLOGENETIC ASPECTS OF THE GENETIC CODE**
 - 5.00 Phylogenetic Aspects of the Genetic Code
 - 4.04 A common periodic table of codons and nucleic acids
 - 4.05 Evolution of the Genetic Code
 - 4.06 GNC-SNS Hypothesis on the Origin and Evolution of the Genetic Code – *by Kenji Ikehara*
- VI. **BIOTECHNOLOGY APPLICATIONS OF PROTEOMIC CODE BASED METHODS**
 - 6.00 Biotechnology Based on the Proteomic Code
 - 4.19 Design and Production of Specifically High Affinity Reacting Peptides
 - 6.01 AffiSeq® Identification - Massively Parallel Sequencing
 - 4.20 Sense-Antisense (Comp) Peptide Interactions - *by Serapian et al.*
- VII. **GENERAL THEORY OF CELL REGULATION**
 - 7.00 General Theory of Cell Regulation
 - 7.01 Receptor-Steroid Variable Complex
 - 7.02 Second Messenger System
 - 7.03 RLVC Hypotheses
 - 7.04 Thyroid Hormone Action
 - 7.05 Information transfer _ Calculation of Information Content.
 - 7.06 Information transfer _ Information Transfer Through Membranes.
 - 7.07 General theory of cell regulation
 - 7.08 Seven fundamental, unsolved questions in molecular biology
- VIII. **TUTORIALS: POWERPOINT PRESENTATIONS**
 - 8.01 In Search of the Nature of Specific Interactions
 - 8.02 Evolution and Origin of Codon Bias
 - 8.03 mRNA folding
 - 8.04 Nucleic acid chaperons
 - 8.05 Periodic Table
 - 8.06 SCH Matrices
 - 8.07 SeqX
 - 8.08 The invention of the proteomic code and mRNA assisted protein folding
 - 8.09 The Proteomic Code
- IX. **VIDEO PRESENTATIONS**
 - 9.01 Biro-Pauling DNA
 - 9.02 The Common Periodic Table of Codons & Amino Acids
 - 9.03 The Proteomic Code
 - 9.04 Completion of the Genetic Code
 - 9.05 Evolution of the Genetic Code & Codon Bias
 - 9.06 Crick and the History of Molecular Biology
- X. **KEYSTONE NOTES**

10.0 Keystone Notes

08 Acknowledgement

09 Afterwords

10 Biro - Short Resume

11 Biro - List of Publications (2001-2009)
